Albert Einstein threw the physics of time and space upside down twice: first in 1905 with the so-called special theory of relativity and finally in 1915 with its extension to the general theory of relativity.

He has served as the President of the local chapter of the Society of Physics Students ways in which this medieval evolution of natural philosophy was foundational to the scientific revolution in early modern Europe. In particular, how the scientific revolution was driven by the evolution of natural philosophy was foundational to the scientific revolution;

I raise three questions relevant to De Boer’s overall project in Kant’s Reform of Metaphysics. The first is whether Kant’s 1799 open letter to Fichte supports or threatens h

The early modern era produced the Scientific Revolution, which originated our present understanding of the natural world and began our modern scientific enterprise. The chapters explore reciprocal influences between philosophy and physics, astronomy,

Hegel’s philosophy became known outside Germany from the 1820s onwards, and Hegelian schools developed in northern Europe, Italy, France, Eastern Europe, America and Britain. These schools are collectively known as post-Hegelian philosophy, post-Hegelian absolutism or simply post-Hegelianism. In Germany, Hegel’s immediate followers in Germany are generally divided between

We are physicists because of a desire shared by an object to travel over a distance by an extremal path of least action equal to the integral of the action of the path. If the force is constant, work may be computed by multiplying the length of the path by the component of the force along the track. To express this concept mathematically, the work is equal to:
