Keywords: Nursing Theory, Nursing Research, Nursing Practice, Nursing Education, Nursing Knowledge Analysis And Evaluation Of Nursing Models And Theories.
The Tidal Model explores the role of border cities in promoting territorial development processes in border regions across the world. It not only explores the remarkable kinds of urban and rural change that addresses territorial and local processes but also the effects of development policies applied to border regions in both Europe and North America. In essence, the book offers a full toolkit of border regions’ territorial development knowledge. In particular, advance a range of policy development proposals. It provides a comprehensive introduction to contemporary thinking about how border cities can play a decisive role in promoting territorial development processes in border regions. The book is divided into four parts. Part I presents a theoretical framework on the role of border cities in promoting territorial development and planning in border regions. Part II debates mainstream policies focusing on supporting border regions and specifically border cities in Europe, the UK, and North America. Finally, Part III presents a wealth of updated knowledge, experience, and case studies from individual border cities and regions, including those from several European and North American countries, as well as the secondary literature of these European border regions associations (AEBR, MOT, and CESCI). The book, rich with practical examples and theoretical insights, offers an in-depth analysis of the field of urban and regional planning and development studies, both geographic and economic development, and policy impacts and prospects.

The book is divided into three parts. Part I presents a theoretical framework on the role of border cities in promoting territorial development and planning in border regions.
