Introduction to Psychology | Open Yale Courses
Paul Bloom is the Brooks and Suzanne Ragen Professor of Psychology at Yale University. He was born in Montreal, Canada, was an undergraduate at McGill University, and did his doctoral work at MIT. He has published in scientific journals such as Nature and Science, and in popular outlets such as The New York Times and The Atlantic Monthly.

Experimental Design | Simply Psychology
Experimental design refers to how participants are allocated to the different groups in an experiment. Types of design include repeated measures, independent groups, and matched pairs designs. Probably the commonest way to design an experiment in psychology is to divide the participants into two groups, the experimental group, and the control group.

Introduction to Psychology | Wondrium
Introduction to Psychology is a grand introduction to one of the most captivating—and human—fields of inquiry. Taught by Professor Catherine A. Sanderson of Amherst College, these 36 insightful lessons not only give you a solid grounding in the history of psychology, but they also introduce you to the most up-to-date 21st-century research and discoveries—including...

4.3 Hearing - Introduction to Psychology
Audition begins in the pinna, the external and visible part of the ear, which is shaped like a funnel to draw in sound waves and guide them into the auditory canal. At the end of the canal, the sound waves strike the tightly stretched, highly sensitive membrane known as the tympanic membrane (or eardrum), which vibrates with the waves. The resulting vibrations are relayed into the middle ear.

Chapter 14. Experimental Designs: Single-Subject Designs
of experimental control, and (2) obtaining precise measures of behavior. Neither of these problems applies to the single-subject approach. The method is relatively popular today but it hasn’t always been. Research in psychology started out using small numbers of participants, and investigators relied heavily on their ability to control...

Introduction to the PSY and NSC majors including the A study of various theoretical views of the mind and the impact of the cognitive movement in psychology; relevant experimental studies are explained...
