**Supervision of Concrete Construction 2** - J.G. Richardson 2003-09-02 This book should be of interest to construction site managers and supervisors; concrete technologist; testing organisations. It covers steel reinforcement, batching and mixing, readymix, handling and transporting, pumping, placing, curing, QC, precast, prestressed, special techniques, repair and some background mathematics.

**Developments in Structural Form** - Rowland Mainstone 2013-04-03 In the critically acclaimed first edition of this book, Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history. In this extensively revised and expanded new edition, now available in paperback, new insights and a full coverage of recent developments in both design and construction are incorporated. The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made. It then looks in turn at all the elementary forms - arches, domes, beams, slabs and the like - which combine into the more complex forms of complete structures, and at the different classes of the complete forms themselves. The development of each form is traced chronologically, but with an emphasis less on the chronology than on the problems that designers have continually faced in trying to serve new ends with limited means or to serve old ones in new ways. The book concludes with a chapter on the processes of design, showing how the designer's freedom of choice has been widened by a growing understanding of structural behaviour.

**Manual of Precast Concrete Contstruction with Large Reinforc -ed and Prestressed Concrete Components,Vol.1 - Principles; Roof and Floor Units; Wall Panels. Trans. from the German by C. Van Amerogen** - T. Koncz 1968

**Sources of Construction Information: Books** - Jules B. Godel 1977

**Industrialized and Automated Building Systems** - Abraham Warszawski 2003-09-02 This book presents a comprehensive approach towards the industrialization of building. It argues that only industrialization and automation can bring radical changes necessary to the building industry.

Housing-Oktay Ural 2013-10-22 Housing: The Impact of Economy and Technology contains the proceedings of the International Congress on Housing: The Impact of Economy and Technology, held in Vienna, Austria on November 15-18, 1981. This book includes many outstanding manuscripts prepared by competent, dedicated individuals. This text covers a wide range of problems associated with housing technology and economy. Some papers detail forming systems for mass housing production; housing option for the elderly; energy aspects of housing design in developing countries; the psychological and physiological ecology of indoor environments; and solar heating and Earth insulation for economical houses. Other papers explore training programs for low-cost housing; influence of color in housing; volatile substances of some materials from housing equipment; the impact of changing society and the economy on the housing industry; comparative housing; energy saving and management in buildings; and industrialization of buildings in developing countries.

Shell Foundations-N. P. Kurian 2006 "Shell foundations are economic alternatives to plain foundations in situations involving heavy superstructural loads to be transmitted to weaker soils. The book presents in one volume the geotechnical and structural aspects of design and construction of shell foundations." "Essentially focused on the needs of postgraduate students in geotechnical and structural engineering, the book will be of immense help to research scholars, design professionals, consulting engineers and architects."--BOOK JACKET.

Mainstone 1998 In the critically acclaimed first edition of this book, Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history. In this extensively revised and expanded new edition, the story is brought up to date with the incorporation of new insights and a full coverage of recent developments in both design and construction. The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made. structural behaviour. 360 photographs and drawings, mostly original and prepared by the author himself, including over 100 that are new, accompany the richly imaged text. Covers all aspects of structure providing the reader with a comprehensive text on the subject. Learn from the vast knowledge of this experienced author. Over 300 photographs and drawings make the book easy to comprehend.
